Synonym sufficient condition for a compact Hausdorf space to be extremally disconnect

Let X be a compact Hausdorff space and C(X) the algebra of continuous functions  $X \longrightarrow \mathbb{C}$ . Recall that C(X) is a vector lattice with the usual http://planetmath.org/PartialOrderorder:  $f \leq g \iff g-f$  takes positive (or zero) values.

**Theorem -** If every subset of C(X) that is bounded from above has a least upper bound (i.e. C(X) is a bounded complete lattice), then X is extremally disconnected.
